Real alternatives for flash, google chrome, Internet Explorer and Opera in your web browser. To Unblock Macros with Super User Mode in Windows XP. An evidence-based approach to the management of hypertension in the elderly. Hypertension is a common and serious problem in the elderly. Appropriate control of blood pressure minimizes cardiovascular events and reduces mortality. Blood pressure targets in the elderly have been adjusted to the recommendations of the Seventh Joint National Committee on Prevention, Detection, Evaluation and Treatment of High Blood Pressure. In this article, issues related to the assessment of blood pressure in the elderly, pharmacotherapy of hypertension in the elderly, drug use in specific patient groups, and antihypertensive drug combinations are discussed. The evidence-based approach that has been used in this review can be used as a model for other clinical situations.

```
