La Voz del Yo Soy. A preliminary study of the relationship between human chorionic gonadotropin and pyridoxal-5'-phosphate levels in serum of normal pregnancy. Pyridoxal-5'-phosphate (PLP) and human chorionic gonadotropin (hCG) were determined in the sera of normal pregnant women using a double-antibody enzyme immunoassay and a radioimmunoassay, respectively. In the sera of normal pregnant women (n = 11) the mean level of hCG was 1370 +/- 70 mIU/ml and that of PLP was 110 +/- 5 mmol/l. The correlation coefficient for PLP and hCG in serum was 0.88; r = 0.94 when expressed in terms of concentration. It is concluded that PLP is not a major constituent of hCG and hence that there is no biochemical basis for hCG being a source of PLP. 2d92ce491b
