Right now I'm trying to do this by doing a simple LINQ query, but it is returning all rows in the DB: var customers = session.CreateCriteria() .Add(Restrictions.Where(x => x.FirstName == "John" && x.LastName == "Doe")) .SetProjection(Projections.GroupProperty("ID")) .SetResultTransformer(new DistinctRootEntityResultTransformer()) .List(); Can anyone explain why this is returning all rows in the DB, or tell me how I should be writing this?
