Category:Indonesian literatureQ: HTTP over SMB2 with SMB_COM_TRANSACTION I have a scenario where I need to encrypt over HTTP and then over SMB, and then decrypt over SMB. The contents on the SMB stream is XML files I send from my C# app. This works fine, but now I need to encrypt the SMB stream to get the security benefit. I am using the SMB_COM_TRANSACTION (Method 1) encryption method as described in the Windows documentation: I've got that working, but now when I decrypt the data, I get back a different length value than when I encrypted it. (Note: I'm sending a length field when encrypting) Here's an example of the data, note the SMB2_CMSG_TRANSACTION2 and SMB2_NEGOTIATE: SMB1-Auth: 0x0000000000000000 SMB1-SessSetupAndX: 0x0000000000000001 SMB1-Flags2: 0x0000000000000000 SMB1-SeqNumber: 14 SMB1-MessageID: 2 SMB1-ProcessID: 2 SMB1-IsSigned: 0 SMB1-NumTransactions: 1 SMB1-NumTransactionsHigh: 0x00000000FFFFFFFF SMB1-Version: 0x000e0000 SMB1-Reserved: 0x0000000000000000 SMB1-TreeID: 0x00000000 SMB1-Reserved1: 0x0000000000000000 SMB1-SessionKey: 0x0000000000000001 SMB1-Flags3: 0x00000001 SMB1-Reserved2: 0x00000000 SMB1-Reserved3: 0x00000000 SMB1-Reserved4: 0x00000000 SMB1-Reserved5: 0x00000000 SMB1-Reserved6: 0x00000000 SMB1-Reserved7: 0x00000000 SMB1-Reserved8: 0x0000000000000000 SMB1-Reserved9: 0x0000000000000000 SMB1-Reserved10: 0x00000000 SMB1-Reserved11: 0x00000000 SMB 2d92ce491b
