A: So, since you mentioned that you are on Linux, I would like to share this command that was suggested here: wget You can find the correct dates using the date and search tools on that page, the example is for 2018-01-01. This will return all the URLs from that page that have the word trends in them. I am going to run it right now and provide the output as you request:

```
root@bytemaster:~# wget --2018-01-01 05:50:51-- Resolving trends.sourceforge.net... 104.132.244.52 Connecting to trends.sourceforge.net|104.132.244.52|:443... connected. HTTP request sent, awaiting response... 404 Not Found 2018-01-01 05:50:51 ERROR 404: Not Found. Hopefully that helps you and solves your problem. I am going to wait a few minutes and see if it returns any more results and I will update this answer with that information.
```

Q: Why do we need to combine both DHCP and PXE (PXE and DHCP) for a network booting? Why do we need to combine both DHCP and PXE(PXE and DHCP) for a network booting? DHCP and PXE used for creating a network booting environment. PXE (Preboot execution environment) was developed by IBM, Microsoft, Intel and other companies, designed to boot machine without an OS. Is it not sufficient to
