Feb 14, 2010 Medal-Of-Honor-Airborne-CD-KEY-IN-DESCRIPTION-Bot-LINK. coub.com/stories/3127985-sony-vegas-9-0-serial-number-1hfsc3404wa104950-taiorvi I'm having a hard time parsing this data, as I haven't been exposed to a very strong CS background. A: The below is based on the assumption that the lines in the question are delimited by and that they all mean the same thing. If there are no quotes around the values, those values are taken as regular strings, and when split on , the splitting occurs at every whitespace. You need to parse the values as dictionaries instead of just splitting them on every whitespace. Using regex will not be suitable, since you need to parse the data not just split it. The regex will not match the line as a whole, it would only match individual values in the line. In the line >>> re.findall(r'^name=([a-z]\*)\s(#.\*?)\s(#.\*?)\s(#.\*?)\s\s.\*?\s(\w+)', 'name=Sony Vegas 9 2d92ce491b
