Simple blending The software's purpose is to offer you a simple tool for image blending so you need not load complex photo composing programs. You can load the Base image, the Overlay photo and a mask that contains a certain degree of transparency. Basically, you can use these instruments to easily place a selected object on a different background. Mask or gradient The transparency mask acts as a crop image tool, meaning that the transparent pixels in the mask coincide with the pixels from the overlay picture that appear in the merged image on top of the base. The gradient works similarly, creating the smooth transition from one photo to another. You can use the mask templates built in the program or you can load custom images with the above mentioned property. Altering colors You can choose not to load a mask or gradient, but instead obtain an artistic result by blending the overlay image in a color altering mode. For instance, the 'Lighten' mode shows only those areas from the overlay image that are lighter than the base photo. Similarly, the Screen mode creates a smooth combination between the base image and the highlighted areas from the second picture. 'Darken', 'Multiply' or 'Color Burn' create the opposite effect, enhancing the contrast, creating shadows and adding drama to your image. Photo editing You can perform minor photo edits to each of the three pictures that you work with. Rotate, flip vertically or horizontally and stretch tamper with the canvas, while 'Convert' to greyscale and 'Invert Image' affect the colors. Image Inc supports JPG, BMP, TIF and PNG input files and allows you to save the merged image as JPEG format.
