To evaluate the accuracy of transvaginal needle aspiration in diagnosing uterine sarcomas, we retrospectively reviewed the medical records and the operative and pathologic reports of 17 consecutive patients with uterine sarcoma who underwent transvaginal needle aspiration and biopsy of uterine sarcoma between January 1982 and December 1992. Cytologic results were correlated with intraoperative and histologic findings. In all cases, the aspirates were adequate for diagnosis. Of the 17 patients, 14 (82%) had transvaginal needle aspiration and biopsy with the same findings as those found on final pathology. Four (23%) had inadequate aspirates, and the diagnoses were fibroid, leiomyoma, and "other." In two cases, the transvaginal needle aspiration results were false negative. In one case, the diagnosis was erroneous. Our data suggest that transvaginal needle aspiration is an accurate diagnostic method in the preoperative workup of patients with uterine sarcoma. From a "Dwightmare" to the crossroads of East and West In the latest entry in the Culture and the Mind podcast series I am speaking with Nienke van Hout, research assistant at the Netherlands Institute for the Study of Crime and Law Enforcement (NSCR) about the concept of culture and crime (and how culture influences the practice and understanding of law) and about the role of culture in determining the paths of crime careers. The long conversation that resulted is here, and I encourage you to listen to it. What I really like about the podcast series is the intimate interaction that it encourages between listeners and speakers, and in this podcast between me and van Hout I learn things I didn't know, and gain new insights. This in particular is reflected in the conversation about the concept of culture and crime in which I learn that "culture" in this case is actually not about ethnic identities or individual dispositions. It is about the local context of crime careers and as such is embedded in the organizational setting in which crimes happen. A person is not characterized by a culture. He is characterized by the organization of which he is a part, and this is the organizational context in which crime happens. Yet, crime is about individuals and what individuals do to other individuals, and crimes can be understood as actions and intentions

Use page-level selection and markup-on-select to create powerful selection sets. Using this new feature you can create an accurate selection without checking for overlap with other objects, such as walls or planks. Include large blocks of dynamic attributes or auto-generated comments in your drawing, and avoid the cost of a separate editable comment layer. Use structural and color layers to manage the organizational structure of your drawing, and easily keep your design objects in context with their own colors, materials and names. Clone and modify existing drawings by finding a reference object in another drawing or file, and setting it as a template to simplify creating similar design objects. Create refined axonometric views from your floor plan with the new Axonometric Grid command. Build your design with the powerful, new command for text tools – Quadrant, which enables you to create quadrants and other shapes with specific measurements. Capture and store your designs in a dedicated database to maintain a streamlined workflow when creating a series of designs. Use the built-in XML (eXtensible Markup Language) format, and create better-structured design documentation with meaningful page headers. Use Storyboard tools to quickly create and manage visual walkthroughs to share your design ideas. Rotate toolbars and panels in the toolbar and panel windows to tailor the way you work to your specific workflow needs. Simplify your design workflow by including multiple reference points in your design elements, including the AutoCAD Reference Point tool (CADREFPO), an independent tool for creating reference points and creating their cross sections. Create a new view in your drawing by selecting a 2D, 3D or annotation objects on the View tab. Use the new 3D and 2D Preview tools to see your objects in 3D and 2D view. Draw your objects more accurately with the new Edit feature. Improve your designs and push your limits with the increased precision. Use the Edit tool and the Edit cursor to manipulate your drawings. Insert a stamp in your drawing by using any of the 80+ predefined stamps included in the drawing. Shape lofting: Shape lofting allows you to quickly and accurately merge, split, and rotate 3D elements, including solids, surfaces, and two-
