MinEd can help you maintain and edit those Unicode-rich text files, like Word documents and Markdown documents, which you deal with. MINED (originally “Minimum EDitor”) is the result of my attempt to make an easy-to-use UNICODE text editor which also keeps in mind that it has to run on “limited” hardware and must obey the “social” expectations of common users. In fact, being as easy-to-use and as powerful as possible with minimum requirements on hardware is the reason why I chose to use the “really small text area” (just 50x30), and to focus on the algorithms and behavior that are responsible for text editing. The main requirements are an ability to write in the text and not have to modify styles and face sizes; and a “socially acceptable” GUI, i.e. simple, clean, and attractive. Other things are a background task for handling clipboard operations, and handling of Character Encoding (Unicode encoding). As a note, all code that I share here is probably old and outdated. I’m not interested in maintaining that stuff, so expect version bumps and don’t bother asking for features I don’t intend to add. The “Kellyanne Con” continues, as President Donald Trump revealed to reporters at the White House Thursday that he intends to remain aligned with his longtime adviser despite the backlash this week over her combative approach to press. With cameras rolling as reporters and photographers jockeyed for position to listen in, Trump fielded questions on a range of topics, from the investigation into Russian meddling in the presidential election to his pick to be the United States’ next ambassador to the United Kingdom. But when it came time to comment on news that Bannon’s ouster from the White House is the result of his “very open” relationship with the now-departed adviser, the president could not come up with a definitive answer. The president was asked whether he felt his relationship with Bannon had made him “complicit in the president’s political opportunism.” “I don’t know Steve, but I would certainly say that he has very little influence, if any,” Trump said. He went on to say that other advisers — including Gary Cohn, a former Goldman Sachs president who sits at the head of Trump’s National Economic Council — “have a tremendous amount to do” with his national economic and security policies. “And I work at a very high level,” he said. “So I have a very high level of influence. I don’t have to talk to anybody.” The president later said that he loves Bannon “very much,” according to CNN’s Kate Turayne, but added that he didn’t feel there was a lot of truth to the notion of him being part of the administration’s so
