I can not understand the verb "dimensionless" because it is an adjective and an adverb -irony-. How will be repeated if the noun of the adjective is not the same as the adjective? A: The adjective "dimensionless" modifies the noun "dimension". The noun "dimension" (with an "s" at the end) refers to "the length, width, and height of a body or surface in each of the three directions". This is known as the "3-dimensional concept". Also, the noun "dimension" is another name for the ratio between the "length, width, and height" of a body or surface, and the "volume". You can think of the ratio as measuring the "size" or "length, width, and height" of the body. So, we can say that a body or surface that is "dimensionless" would have zero "length, width, and height" (dimensionless length, width, and height), and zero "volume". Such a body or surface would be impossible to imagine! (AP Photo/Elaine Thompson, File) NEW YORK (AP) — Amazon on Wednesday confirmed plans to build its own fast-delivery network that could upend how millions of consumers buy daily staples and everyday products from diapers to dog food. Rumors of the unusual move emerged in November, and Amazon later described them as “mergers and acquisitions speculation.” In its official confirmation, Amazon said the service would offer more than
