History of AutoCAD and AutoCAD LT  
In the late 1970s, Civil Engineering companies built Computer Aided Design (CAD) systems that were used to design buildings and highways. CAD systems were first used in the United States and Canada in the 1970s, and by 1980, AutoCAD (originally called AutoCAD 1.0) had become the dominant CAD system worldwide. It was first released in December 1982. In 1987, AutoCAD was a major component of the AutoCAD-500, a system designed to handle engineering design tasks and to allow users to connect to data sources such as construction plans, surveys, and other engineering products. Autodesk

acquired AutoCAD from a company called Data Design in July 1987. In 1988, it was the first commercially available, integrated CAD software to allow computer-to-computer integration with database software. At this time, the term CAD software referred to the total software used to create a design, including drafting tools, computer-aided design (CAD) tools, and post-processing tools. The word software was added to the AutoCAD name when a CAD application named AutoLISP became available in 1990. AutoLISP could import and export files in both AutoCAD and non-AutoCAD file formats. A large user base also increased AutoCAD's popularity in the automotive design industry. AutoCAD was the first CAD program that could import and export to dBase III and DesignFinity. In 1990, the AutoCAD-500 was the first commercially available CAD system to use the

Customer support AutoCAD's customer service department has an online FAQ and a Support Mailbox as well as telephone support provided by Autodesk. Autodesk also provides support for their other products such as AutoCAD LT and Visio. Education In 1998, Autodesk started publishing a series of e-books aimed at architecture, engineering, landscape, and interior designers, in partnership with Pearson Publishing. In 2007, Autodesk launched a set of e-books geared towards the early Autodesk certified apprentice level, and a number of other Autodesk educational courses. In 2016, Autodesk rolled out the A360 Course offering, a set of web-based courses based on Autodesk's 360 products which provide a comprehensive understanding of Autodesk's products, and are provided for free to all registered users. The courses available at Autodesk Learning are suitable for the entry level apprentice and contain lessons that cover the following areas: AutoCAD/AutoCAD LT: the basics of drawing, basic functionality of software and detailed views, toolbars and toolbars, shortcuts, menus, animations, external toolbars, user preferences, setting up drawing layouts, toolbars, and so on. AutoCAD Architecture: areas of project management, architecture development, roof design, building construction, and so on. AutoCAD Electrical: the basics of software, operating system, applications, network, and hardware. AutoCAD Civil 3D: areas of Project Scheduling, construction management, project delivery, geospatial analysis,

and so on. AutoCAD MEP: areas of project management, collaborative design, building automation, system integration, and so on. AutoCAD Plant 3D: areas of project management, collaborative design, building automation, system integration, and so on. AutoCAD R&V: areas of project management, geographic information systems, survey engineering, building automation, building energy, and so on. The Autodesk A360 Course content is designed to be delivered via the web, which is done by recording a live presentation, and the content is accessible via any Internet-connected computer. Autodesk provides a set of videos that teach the A360 Course topics for free to all registered Autodesk users.
