Architecture and interior design AutoCAD Architecture is an extension for AutoCAD which is the design and drafting software program for architects. Its functionality extends the basic functions of AutoCAD to support a complete process for architecture and interior design. It can be used by architects, contractors and designers. AutoCAD Architecture is intended for designers, contractors and architects to make drawings that are ready for the contract process. Architecture is more than a blueprint and a scale drawing. The product's functionality offers extended options for style, materials, materials libraries, custom materials, and scale models. It can be used for product design, site analysis, electrical and plumbing design, building design, construction document preparation, and 3D rendering. Features AutoCAD Architecture contains the following features: Material library: AutoCAD Architecture provides full functionality to load, edit, manage and catalog materials. Materials can be transferred from other software applications, such as Revit, with the use of the Material Transfer Tool. Material libraries can be defined at the drawing level or at the project level. Using the drawing-level material libraries, a material can be assigned to multiple objects, while the project-level material libraries allow a material to be assigned to only one object. Style templates: With AutoCAD Architecture, users can create style templates that can be used to assign styles to multiple objects in a drawing. Users can create a family of styles from a single template. The style templates can be used to create a style for multiple objects, and each template can be used with one or more of the objects. Style library: AutoCAD Architecture features a library that contains pre-defined standard styles. These standard styles include information about the selected objects such as size and position, while others include information such as color and linetype. Users can create their own custom styles. Custom styles can be saved into the library, and can be applied to objects. Materials: AutoCAD Architecture provides full functionality to load, edit, manage and catalog materials. [Meta-analysis on acupuncture for knee osteoarthritis]. To systematically review the randomized controlled trials (RCTs) on acupuncture for knee osteoarthritis. RCTs on acupuncture for knee osteoarthritis were searched from the following databases: PUBMED, EMBASE, Cochrane Central Register of Controlled Trials (CCRCT), Chinese Biomedical Literature Database (CBM), Chinese Journal Full-text Database (CNKI) and Chinese Scientific Journal Database (VIP). Relevant published studies in China were also identified manually. The quality of the included studies was assessed by the Jadad scale. Meta-analysis was performed by RevMan 5.1 software. Eight studies were included in this review. All of the studies were high quality and 4, 3, 1 studies were 2, 4, 3. The total effect was -0.69 SD (-1.42, 0.06, Z = 1.46, P = 0.14) in the total population. There was significant heterogeneity in the study (P Q: In Excel, how to concatenate the next 7 rows (starting with cell A1) in a separate cell?
