Transparency is undoubtedly a very nice visual effect that's now available in almost any operating system out there. That's exactly why Trans-XP has all the chances to succeed in today's crowded software market. This lightweight application was developed to bring transparency on Windows XP platforms, allowing users of this particular Windows version to add transparency to some of the running windows. Supposed to contribute to an increased workflow by helping users better organize the screen, Trans-XP doesn't assault the user with complex features. Instead, it relies on three major features that bring transparency on Windows XP workstations. Users are thus allowed to quickly select a window to be made transparent, configure so-called favorite windows to quickly add this effect or simply select "pre-chosen" windows that can be automatically made transparent. Basically, Trans-XP works with any window appearing on your screen, with the transparency level easily configurable via the main window of the app. Plus, you can define the action to be performed when right-clicking a titlebar, with two options at your disposal: make windows transparent or opaque. Trans-XP may sometimes affect system performance especially on older machines, so it's very important to avoid adding transparency to many windows on your screen. On the other hand, the application remains stable and reliable all the time, with dedicated options to automatically launch at startup and thus make configured windows transparent without any user input. All things considered, Trans-XP is one of the tools that really deserve attention from Windows XP users. It's easy to use and provides so much information that even a complete rookie could figure out how to take the most out of its features without any risk. Microsoft is introducing the Windows Data Protection Manager (DPM) in Windows 10 as a feature that will allow users to make BitLocker more secure without requiring a master password. This feature will provide better encryption capabilities, making it more difficult for intruders to remove data from your PC. DPM will function like a classic BitLocker key and BitLocker will work in concert with DPM to encrypt data on your drive. Users who use BitLocker along with DPM will be able to perform an additional data wipe when the drive is encrypted and inactive. DPM will also protect data on removable media when a user has enabled self-encryption. Windows 10's DPM will work with BitLocker, and it will support BitLocker Enterprise, BitLocker ToGo, and BitLocker Drive Encryption editions when it's introduced with the next major Windows 10 release in a few months. The name "Data Protection Manager" (DPM) is a rather odd one. Although some people may associate the term with Oracle's SaaS product, DPM is actually a storage management utility that will manage the encryption and encryption status of each file on a Windows 10 PC. Windows 10 DPM is a solution to a problem that has existed for a long time, but a couple of years after Windows 7's release, Windows hadn't yet implemented a way to manage data encryption with a master password. Paragon NTFS was developed to allow users to easily manage their files and folders, in order to make them more accessible and increase data security. Manage Data NTFS was first introduced in 2007 as a freeware program that could also be purchased as a fully-fledged commercial alternative. The latter version features additional features such as the ability to check and repair deleted data, manage network access and sharing permissions. NTFS File System Manager is certainly one of the few freeware tools for 6a5afdab4c
