video teleconferencing devices, video streaming devices, and the like. Digital video devices implement video compression techniques, such as those described in the standards defined by MPEG-2, MPEG-4, ITU-T H.263, ITU-T H.264/MPEG-4, Part 10, Advanced Video Coding (AVC), the High Efficiency Video Coding (HEVC) standard presently under development, and extensions of such standards. The video devices may transmit, receive, encode, decode, and/or store digital video information more efficiently by implementing such video compression techniques. Video compression techniques perform spatial (intra-

picture) prediction and/or temporal (inter-picture) prediction to reduce or remove redundancy inherent in video sequences. For block-based video coding, a video slice (i.e., a video frame or a portion of a video frame) may be partitioned into video blocks. Video blocks in an intra-coded (I) slice of a picture are encoded using spatial prediction with respect to reference samples in neighboring blocks in the same picture. Video blocks in an inter-coded (P or B) slice of a picture may use spatial prediction with respect to reference samples in neighboring blocks in the same picture or temporal prediction with respect to reference

samples in other reference pictures. Spatial or temporal prediction results in a predictive block for a block to be coded. Residual data represents pixel differences between the original block to be

The KEYMACRO makes possible a very high accessibility of music with the use of a specialized, easy to use midi controller with 23 individual buttons. It is possible to arrange the buttons in a group or simply assign a function to each one according to its shape. It is also possible to assign different functions to each of the keys, which gives the

necessary flexibility to each one of them. The controller is easily accessible from the keyboard, and allows for a very personalized choice of the colors, as each one can be different. The black frame of the midi controller can be replaced with the frames of the other users of your computer, so that everyone has a personalized look. Interactive music applications are very useful for the users, and since the KEYMACRO provides a very intuitive and efficient use, it could be an important tool for users who use different applications in order to make music. Lignosulfonate was used as the principal component of the novel dye wastewater adsorbent and it was impregnated into microfiber cloth with

polyvinyl alcohol (PVA) and styrene-butadiene-styrene (SBS) microsphere. The performance of this adsorbent was evaluated in terms of contact time, adsorbent dosage, pH and initial concentration of dye. The results indicated that this novel adsorbent had a good adsorption performance on dye wastewater with a half-life time of 12.5h, a pseudo-second-order rate constant of 1.56×10^{-5} mol/(g·min) and an adsorption capacity of 1.62mg/g. The adsorption process could be described by the Freundlich isotherm with correlation coefficient of 0.995. FTIR and SEM analysis showed that the PVA/lignosulfonate-SBS microspheres

contained abundant adsorption sites, which could improve the removal efficiency of dye wastewater.The effects of prazosin, propranolol, and verapamil on alpha-adrenergic contractile responses in mesenteric resistance vessels of rat and guinea-pig. 1. The effects of prazosin, propranolol, and verapamil on alpha-adrenergic contractile responses to field stimulation and norepinephrine were investigated in rat and guinea-pig mesenteric resistance arteries. 2. Propranolol (10^{-5} mol/l) significantly increased responses to both field stimulation (ED50 7.1 +/- 0.8 vs. 2.3 +/- 0.2 Hz; P less than 0.001) and norepinephrine (ED50 2.6 +/- 0.1 vs. 1.2

+/- 0.1 nmol/l; P less than 0.001) in rat and guinea-pig arteries, respectively. 3. Verapamil (10^{-5} mol/l) significantly decreased responses to field stimulation (ED50 5.2 +/- 0.4 vs. 2.4 +/- 0.2 Hz;
