- Visual Paradigm XMI editor - Generates, modifies and saves OWL 2 (RDFS and IRI-based) and OWL Lite (rdf:+triples

and OWL Full) ontology, visualizing it in the XMI editor. - Microsoft Visio 2010 XMI editor - Generates, modifies and saves OWL 2 (RDFS and IRI-based) and OWL Lite (rdf:+triples and OWL Full) ontology, visualizing it in the Microsoft Visio 2010 XMI editor. - ArgoUML XMI editor - Generates, modifies and saves OWL 2 (RDFS and IRI-based) and OWL Lite (rdf:+triples and OWL Full) ontology, visualizing it in the ArgoUML XMI editor. KEYMACRO Download: For those of you who want to migrate from the XMI Editor to VISIO 2010 and ArgoUML, this tool will help. Migrating from XMI to Visio 2010 requires some changes in the XMI schema and the generation of the target classes. Similarly, the conversion to OWL requires some changes in the source classes. For this reason, the Migrator uses the following steps: The first step involves the correct mapping of classes. The second step involves the mapping of properties. The third step involves the correction of inconsistencies in the source. In the fourth step, it is applied the mapping of the annotations. The fifth step is applied to the class properties and then the visualizations are performed. So far, this has been a translation from the XMI files into the following formats: - XMI1.0 (OGIF) - XMI2.1 (OML) - XMI2.1 (XMI2.1) - XMI2.1 (IGR) - XMI2.1 (IFW) - XMI2.1 (NBF) - XMI2.1 (UDN) - XMI2.1 (OBN) - XMI2.1 (OBX) - XMI2.1 (ONT) - XMI2.1 (VMD) - XMI2

Google's plan to build a new tech campus in San Jose has triggered plenty of criticism — from the lack of affordable housing nearby to the threat to the environment and surrounding neighborhoods. But there's a new question that's gaining traction, with some now asking: Does this project truly have an impact on the city's character? San Jose's current motto, "The City That Works," may have a little bit of work to do. Although there's no shortage of criticism against Google's planned \$1.6 billion tech campus, "the project is going to change the city in a positive way," said Maria Cooper, chair of the San Jose Downtown Association's zoning and development committee. "It's going to be great for our young people, it's going to be great for our economy," Cooper said, but she added: "I think we should start out with our city motto — 'The City That Works' — and make sure we're helping our existing business community grow with the help of the students that come in." "We need to support the existing business community, and if that means bringing in a big tech company that will bring jobs, bring a lot of cash, we should embrace that," she added. The Google campus will be built near the Diridon train station, one of the city's most visited attractions, just off Interstate-280. As planned, the new campus will be made up of offices, housing, restaurants, retail and open space. A location near Diridon

XMI2OWL convert XMI to OWL The converter can export the following to OWL: 1. Relationships 2. Classes 3. Instances 4. Other Visual Paradigm models 5. OWL. First of all, this an excellent project and I'd like to see more of them in the future. It would be nice to support more UML diagrams than just Visio (which is the support it currently has) and it'd be nice to be able to export in more than just OWL. But it seems to me as something that could be taken to the next level. I believe, that the conversion can be done in two directions. 1. On the from end, using the Visual Paradigm engine to create a XMI to an object model and then create an XML file, and, 2. On the other end, using the UML2OWL to convert an XMI to an object model and then convert it to OWL. Which means, that the same XMI will be converted in both directions. This is really only helpful if the two applications have different extensions, but the application should also support a general 'view' where you can select your target UML tool and then it will create the XMI for you. As my application needs this, I think it is a good use case, because you can use my application and send the generated XMI to another application and they can convert it. But right now I'm limited to the XMI export. I have a set of UML diagrams (XMI files) with high quality and I have a need to generate an OWL file from them, to be able to "expose" the model in a web application. I have tested the latest version of the UML2OWL tool and there is a compatibility issue with Visio 2010 (and I have seen the same error with another tool, but I am not sure it is valid). I am using the converter on a VMWare virtual machine with Microsoft Visual Studio 2008 (Any other version is not supported), and it just exits without any message, although there is no error message. I am also using Microsoft Visio 2010 and the XMI-to-OWL tool has some limitations (as described above). Could you provide any information about a possible resolution? I really appreciate any help and tips. Best regards, Vasile Hi Vasile, I am looking for the same service: I am working on UML models that will be presented in a JAVA-UI for use in my company. What I need is to create a XMI of these models and export it to OWL to make them more accessible to the user. Can you help me with the export and please describe what you are using? Any help will be appreciated.
