A: You are attempting to install the 64-bit version of AutoCAD onto a machine that only has a 32-bit version of Windows installed, and when you attempt to install, it will complain about incompatibilities. When you run the 64-bit installer, you are prompted with a screen that asks if you want to download the 32-bit version of the software. If you don't receive that screen, you are most likely already running the 32-bit version of AutoCAD, and this might cause some incompatibilities that make the installer deny you further installation. The fact that you are using a.rar of 64-bit instead of a.zip of 32-bit might also cause some incompatibilities. A solution to your problem would be to downgrade the version of AutoCAD you are running. The various options would be to run the program as a 32-bit application and not use a 64-bit version of AutoCAD, or install a 32-bit version of AutoCAD and use the 32-bit version of Autocad. Evaluation of the risk of laparoscopic cholecystectomy in patients with ulcer disease or history of gastrointestinal bleeding. Most surgeons believe that gallbladder disease is an indication for laparoscopic cholecystectomy (LC), and the risk of intraoperative or postoperative complications is considered acceptably low. However, reports suggest that surgical and anesthetic risks are higher in patients with

---

ulcer disease and recurrent bleeding episodes from upper gastrointestinal tract (GIT) ulcerations. The aim of this study was to evaluate the risk for intraoperative and postoperative complications of LC in patients with signs and symptoms of peptic ulcer disease and previous gastrointestinal (GI) bleeding. In this prospective, non-randomized study
