It is fully compatible with Windows XP, Vista and Windows 7. Requirements:.NET Framework 4.0 Image size: 32.0 MBConventional clock signals, such as the timing signals used in data communications systems, such as asynchronous transfer mode (ATM) systems, are typically generated by a clock generator or clock recovery circuit using phase locked loop (PLL) techniques. For example, a conventional clock recovery circuit may include a frequency doubler, which generates twice the clock frequency of an input timing signal. A divider may also be used to divide the output of the frequency doubler to generate a clock output signal. A PLL circuit may be used to stabilize the phases of the input timing signals and the output clock signal. Therefore, conventional clock recovery circuits tend to be expensive and complicated. In addition, conventional clock recovery circuits tend to lock-in to certain types of timing signals. These conventional clock recovery circuits cannot lock-in to output clock signals having different ranges. For example, a conventional clock recovery circuit cannot lock-in to clock signals having different ranges to generate output clock signals for data communications systems, such as ATM systems. In one embodiment of the present invention, an apparatus includes a coupling device. The coupling device may include a transistor. The transistor may have a transconductance. The transistor may have a conductance. The transistor may have a resistance. The transistor may be a field effect transistor (FET). The transistor may be a p-channel FET (PFET). The transistor may be an n-channel FET (NFET). The transistor may be a bipolar junction transistor (BJT). The transistor may be a Metal-Oxide Semiconductor Field-Effect Transistor (MOSFET). The transistor may be a junction-gate transistor (JGT). The transistor may be a sub-micron-line-gate transistor (SMLGT). In another embodiment of the present invention, a method of communicating data includes receiving a plurality of timing signals. Each of the plurality of timing signals may have a phase. The method may include determining a desired phase for a last of the plurality of timing
